

Backermatic Safety Thermostat

Description

Second Generation Safety Thermostat

The Backermatic BMST Thermostat is an ideal solution for retrofit to existing installations as it is possible to bring your old system up to the new standard by simply changing the thermostat. Alternatively, it can be incorporated into any of our Immersion range (Backer type VC) to enable the Immersion heaters to meet the new standard.

Our new range of BMST thermostats incorporate a secondary safety cut-out, which is independent of the main thermostat. The new thermostats have a second set of contacts which open and limit the water temperature to 80 degrees centigrade should the primary thermostat fail. The second cut-out is non self resetting.

Product Code	Catalogue Number	Thermostat Length
13200J	BMST 7	7"
13201J	BMST 11	11"
13203J	BMST 18	18"
